

Nathan Mendis

+91-9607402686 nathanmendis17@gmail.com LinkedIn GitHub Portfolio

Backend-focused Software Engineer experienced in building scalable web applications, distributed AI systems, and cloud-native solutions using Django, React, Docker, PostgreSQL, and modern LLM frameworks.

Education

P.E.S. Modern College of Engineering <i>B.E. Artificial Intelligence & Machine Learning (GPA: 8.29)</i>	Pune — 2022–2026
Loyola High School & Junior College <i>X: 84.2%, XII: 67%</i>	Pune — 2010–2022

Technical Skills

Languages: Python, Java, JavaScript, SQL, C++
Frameworks: Django, Django REST Framework, FastAPI, Flask, React
Backend: REST APIs, JWT, OAuth2, WebSockets, Gunicorn
Databases: PostgreSQL, MongoDB, SQLite, PGVector
AI/ML: LangGraph, LangChain, RAG, LLMs, Prompt Engineering, Transformers, scikit-learn
DevOps & Tools: Docker, Redis, Celery, Git, GitHub Actions, CI/CD, Linux, Nginx
Cloud: Microsoft Azure, AWS, Vercel

Experience

Freelance Full Stack Developer The Third Space	Jan 2026 -Feb 2026
– Built and deployed a serverless React (Vite) platform serving 50+ daily active users with automated Vercel deployments. – Designed a lightweight CMS using Google Sheets + OpenSheet API, enabling non-technical content management. – Integrated OpenSheet API and Elfsight to enable dynamic content management and real-time Google Reviews.	
R&D Intern PureID Pvt. Ltd.	Jan 2025 – Sept 2025
– Developed a production-ready Django + Django REST Framework pre-onboarding platform with RBAC and secure JWT authentication. – Designed PostgreSQL schemas supporting scalable enterprise workflows and efficient data retrieval. – Deployed on Microsoft Azure using Linux infrastructure while collaborating through Git.	

Projects

Book-A-Vibe	<i>Selenium, RAG, PGVector, Celery, Docker</i>	—	GitHub
– Built a distributed RAG system using PostgreSQL, PGVector and Celery for semantic document retrieval. – Designed a dual-worker asynchronous architecture with Docker and Redis for scalable processing. – Implemented semantic search across large document collections using PGVector embeddings.			
Harvey – AI HR Agent	<i>LangGraph, Docker, RAG</i>	—	GitHub
– Developed a hybrid LLM agent system (8B + 17B models) for multi-step HR workflow automation. – Built an agentic architecture using LangGraph for tool orchestration and decision-based execution. – Implemented a secure multi-tenant RAG pipeline for handling sensitive HR data.			
VibeeChat	<i>Django, DRF, JWT, Cryptography</i>	—	Live
– Built a secure messaging backend using Django REST Framework, JWT authentication and encrypted message storage. – Implemented REST APIs with role-based authorization for secure private communication.			
PrintTracker	<i>Flask, SQLite, Python, Cryptography</i>	—	GitHub
– Engineered a zero-config desktop document queue manager, packaging the Flask/SQLite runtime into a standalone Windows executable. – Developed an offline licensing security system (DRM) using SHA-256 hashes to validate setups without external servers. – Created a transactional file-status system to handle disk-level renames while preserving database audit logs via soft-deletion flags.			

Leadership Activities

- Treasurer, **CODE Club (AI-ML)**, P.E.S. Modern College of Engineering (2023–2025); organized technical events and seminars, developed backend features for the club's Django quiz platform, and coordinated participant management.
- Represented the department in **Inter-Department Football Tournament**, demonstrating teamwork, leadership, and competitive sportsmanship.
- Participated in multiple **National-Level Hackathons and Project Competitions**, building AI and full-stack software solutions under time-constrained environments.
